Fidelity Investments, Merrimack, NH

Sep 2010–May 2011

Business Analyst

Fidelity Investments has wide range of financial products like mutual funds, retirement plans, annuities, asset management. It has different source systems in various locations. This project is about calculating the compensation for agents who sell Fidelity products. This is a data warehousing project wherein the data from several source systems is picked and sent to data marts for agent compensation calculation after a few validation checks. Data is picked from 7 mainframe source systems and sent to a staging area using ETL. The data then is directed towards a transaction enrichment data store. After a series of validation checks and filtering, the data is finally sent to the data mart. This data is utilized for the downstream applications.

Responsibilities:

- Conducted detailed Requirement gathering, Gap Analysis, Impact Analysis by interacting with internal stakeholders, business users in understanding their business processes, in understanding their proposed IT system.
- Created specs for the data extraction, cleansing, validation & population using automated Decision Stream scripts.
- Developed activity flow use case diagrams for a module to make the IT team understand the functionality of various scenarios.
- Designed the detailed Data-Models of Conformed Dimensions in the worker's compensation subject areas, corresponding to the agent balances & Journal Detail Fact entities.
- Involved in Design mappings, created data flow diagrams and documented the ETL high level and low-level design approach.

- Designed workflows using Informatica Power Center to perform ETL on the data from the staging area to the transaction enrichment data store and to the compensation data marts.
- Developed various transformations like expression, joiner, and aggregator as per the requirements and executed the workflows and verified the data on data mart.
- Worked with DBA teams to transitional logical data model to physical database design.

Environment: Microsoft Office (Excel Word, PowerPoint, Project), Rational Requisite Pro, MS Visio.
